WINCORE®
WINDOWS & DOORS
The way it should be.®

7700

YOU EXPECT A LOT FROM A WINDOW COMPANY. BUT THEN AGAIN, SO DO WE.

Quality construction. That's what it's all about. It's why we're so confident that Wincore's® 7700 windows represent some of the best thinking in the industry. And it's why, once you see them for yourself, we think you'll agree. Beautiful designs. Dependable performance. Unmistakable details. After all, you wouldn't settle for anything less. So, why would we?

Beautifully beveled vinyl profiles accurately reproduce the traditional look of wood.

TOUGH ENOUGH TO WEAR PINK?™

Proud to support breast cancer research.

JUST WHEN YOU THINK IT CAN'T GET ANY BETTER, IT DOES.

OPTIONAL TRIPLE-PANE GLASS

Triple-pane Insulating glass unit features three panes of double strength glass that create two separate air spaces for increased resistance to temperature transfer.

Argon Gas Odorless, colorless non-toxic gas that is heavier and more dense than air – thereby lowering convection rates and increasing energy efficiency.

Dual Low E Coatings Doubling the protection, a low emissivity coating is applied to two glass surfaces.

Optimum Air Space The air space inside the insulating glass unit is the optimum size for maximum efficiency.

Dual Warm Edge Spacer System Pre-desiccated U-channel spacers separate each pane of glass, reducing conduction and helping to maintain more even indoor temperatures.

Style Availability

Double Hung | Slider | End Venting Slider | Casement | Awning | Picture | Patio Door

Size limitations do apply. Consult with Inside Sales prior to ordering.

LOW E GLASS OPTIONS

Benefits of Low E

Double-strength exterior glass pane with triple layer Low E coating delivers the ultimate in high visibility and maximum solar control. Low E glass helps maintain even temperatures inside the home in all climate conditions. In winter and colder climates, Low E helps retain heated air inside the home. In summer and warmer climates, it helps keep warm air outside and cool, air-conditioned air inside the home. The no-haze Low E glass also blocks 95% of ultraviolet rays that fade carpet, draperies and artwork.

LEEP Glass Comparison

Dual pane windows with LEEP (Low E Extra Performance) Glass from Wincore® deliver thermal performance comparable to windows with triple glass from other manufacturers. LEEP (also known as Supercharged Low E) glass looks like regular Low E glass, but it has a supercharged coating on the inside pane of glass that gives even higher protection than the standard Low E coating.

ES7N

Wincore's ES7N glass package is designed to take your windows to the next level. It consists of three specialized layers, each playing a crucial role in enhancing the performance of your windows. These layers not only boost the efficiency of your windows but also contribute to a higher Solar Heat Gain Coefficient (SHGC), allowing more natural light to enter your home.

Argon Gas

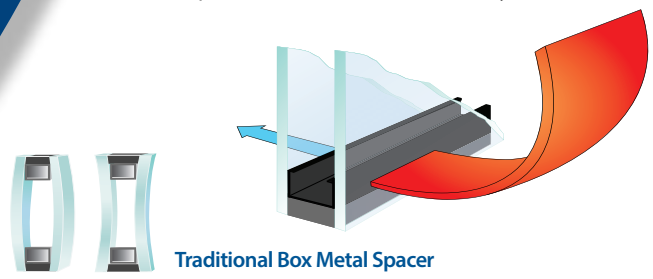

Odorless, colorless non-toxic gas that is heavier and more dense than air – thereby lowering convection rates and increasing energy efficiency.

Optional Laminated Glass

Laminated glass makes it very difficult for someone to force entry into your home through the window, providing an extra layer of strength and security for you and your loved ones.

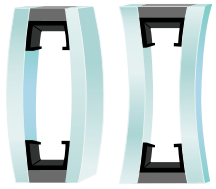

Warm-Edge Spacer System

With traditional box metal spacer systems, when the glass expands and contracts with temperature fluctuations, it can damage or completely break the seal inside the glass unit, leading to drafts and complete window failure. But because the Warm-Edge Spacer is made with a U-channel design, as the glass expands and contracts, the spacer flexes and the air-tight seal remains intact. In addition, the U-channel spacer is far less conductive than metal and thereby reduces temperature transference dramatically.

Traditional Box Metal Spacer

Warm-Edge Spacer System

SOMETIMES OUR PRODUCT DESIGNERS GET CARRIED AWAY. AND FOR THAT, WE OWE THEM A BIG FAT THANK YOU.

As beautiful as they are on the outside, the real beauty of Wincore® 7700 windows lies beneath the surface. With a host of the most popular homeowner features coupled with state-of-the-art, advanced manufacturing processes, each window in the 7700 product lineup offers a dependable peace-of-mind performance. In addition, the low-maintenance vinyl can most often be cleaned with a damp cloth and resists fading and discoloring with age. But the best part is, every 7700 window features integral details for added insulation and maximum performance.

Lifetime Limited Warranty

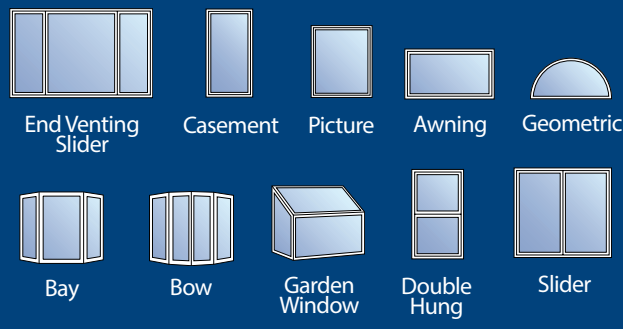

Warranty coverage does not extend to problems caused by improper installation. Warranty issues must first be investigated by your installation contractor. See printed warranty brochure supplied at installation for complete details or visit www.wincorewindows.com.

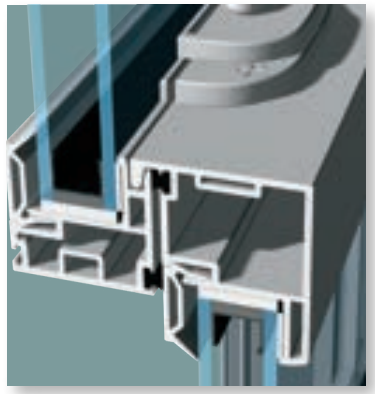

FEATURES

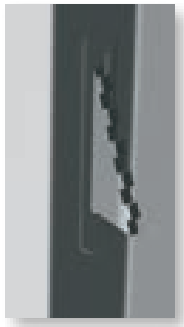

1. Frame profiles feature internal divided chambers for added rigidity and enhanced thermal performance.
2. Double-strength insulating glass unit is ¾" – optimum size for dependable energy efficiency.
3. Glass edges are positioned ½" into the sash to help maintain even temperatures.
4. Frames and sash are welded at mitered corners – the strongest type of construction on the market.
5. The sloped sill design promotes water drainage during heavy rains.
6. Multiple weatherseals at various points around each sash reduce drafts.
7. Sash feature a closed-cell foam barrier seal at the sill to block water penetration.

7700 WINDOW STYLES

At the point where operable sash meet, the interlocking design of the meeting rail or stile keeps sash together tightly around weatherstripping to further increase weather resistance.

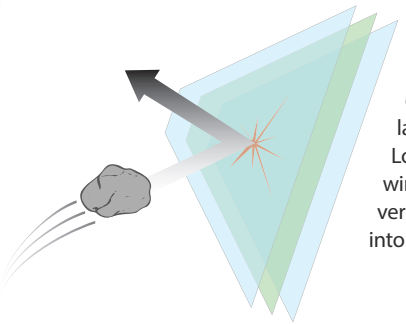

Double Hung windows feature two vent latches for partial ventilation.

Windows with operable sash move smoothly and easily because of a ¾" constant force coil spring balance system.

Optional laminated glass is a difficult-to-penetrate laminate layer between two panes of glass. Located on the interior side of the window, the laminated layer makes it very difficult for someone to force entry into your home through the window.

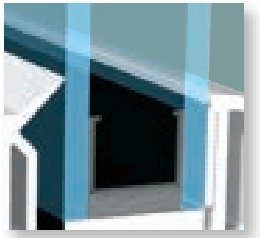

On the popular Double Hung window style, low-profile latches release the sash to tilt in – allowing interior and exterior cleaning to be done from the inside.

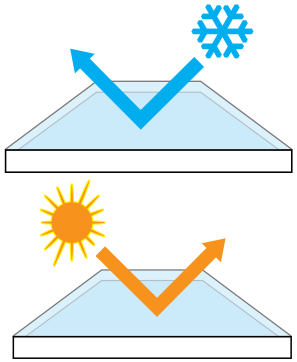

IT DOESN'T MATTER WHETHER YOU LIKE IT HOT OR COLD. WE KNOW HOW TO MANAGE BOTH.

Today, energy efficiency is a bigger deal than ever. No wonder. With rising heating and cooling costs coming in at record numbers, homeowners have to make every dollar count. That's why we are proud that Wincore® 7700 windows are some of the most advanced, most energy efficient and highest performing replacement windows available. Making the most of warm-edge technology coupled with intuitive design features, Wincore® 7700 windows are an excellent choice to help reduce heating and cooling costs in every climate region across the country.

The Intercept® spacer inside the insulating unit features a unique, u-channel design that is more efficient than box spacers.

All 7700 windows help to lower energy costs because they feature Low E glass and Argon gas inside the insulating glass unit. Low E glass helps keep heated air inside during colder months and air-conditioned air inside during warmer months. Argon gas is a non-toxic gas that is heavier than air. By replacing the air inside the insulating glass unit with Argon, it adds higher insulating values and increases efficiency.

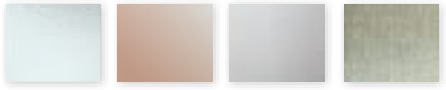

7700 windows are more engergy efficient when ordered with optional Low E glass and an Argon gas-filled insulating glass unit. Low E glass helps keep homes warmer in the winter and cooler in the summer.

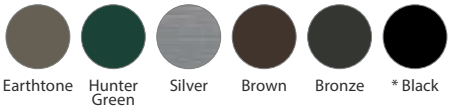

IT IS GOOD TO HAVE OPTIONS.

DECORATIVE GLASS

Obscure | Tinted Bronze | Tinted Grey | Rain Glass

EXTERIOR LAMINATES

Earthtone | Hunter Green | Silver | Brown | Bronze | * Black

**Not all Interior finishes avaialble in all Exterior finishes.*
Black Interior only available with Black Exterior. Limitations apply.
Contact your customer experience team for more information.

The power of collective thinking.

In this business, everyone knows that great people working together end up providing great windows and doors. That's why when we set out to design and build the best windows and doors in the industry, we focused on people first. People with advanced technical knowledge. People who know how to do things right the first time. But most importantly, people who realize that integrity and trust are not simply words, but a way of life.

With more than 200 years of combined experience under our belts, you can clearly see our promise of quality and innovation in every window and door we make. Not to mention how we go about making them.

To us, it's about creating an environment that brings out the best in everyone, and accepts nothing less. It's about doing things the way they should be done, not necessarily the way they've always been done. It's about giving back to our communities and the things that matter most. And it's about family – ours, as well as yours.

At Wincore®, our philosophy is simple. It's not about being the biggest. It's about being the best. Because to us, that's the way it should be.
